

Software Engineering Intern (f/m)

We are ... a venture providing software services integrating wireless telecommunication devices into professional work flow processes and form a major part of Movilitas Enterprises. The company was founded 3 years ago and has experienced substantial growth ever since. Today we maintains offices in Germany, UK, Spain and the Czech Republic.

We do ... mobilization of enterprise business processes. In the mobile domain Movilitas concentrates on the innovative use of RFID and barcode technologies to provide customers with advanced "tracking and tracing" services of assets. Our competitive advantage lies in our unique ability to leverage ultra-light wireless telecommunication devices to increase the efficiency of business processes.

You are ... enrolled in a university, preferably in a late semester and interested in a 12 weeks internship. You have some experience in project work, knowledge of core Java Technologies (J2SE) and JSF, fluent English skills, experience doing presentations and workshops, analyzing processes and writing business blueprints.

You will ... enable internationalization of web-based user interface components; conduct functional application tests with error reporting; document solution set-up procedures; evaluate remote support alternatives for mobile applications; design and implement automated mobile device configuration.

... send your CV to hr@movilitas.com
