

Student Software Engineer

Mannheim Area, Germany

LivePerson is the market leader in real-time intelligent customer engagement.

As a B2B SaaS company with 20 years of experience and the heart of a startup, we work day in and day out to help our customers live out our mission of creating lasting, meaningful connections with their customers.

We are innovating the way the world uses the latest technologies while we empower our developers to closely and rapidly impact how and what our software does throughout our infrastructure. Our employees enjoy career and professional growth opportunities and directly influence the transformation and ongoing improvement of our global product, which is used by some of the world's leading companies.

What Will You Own?

- Design and prototyping of a mobile application from scratch.
- Create mockups, wireframes and concepts for implementation.
- Develop in Java, JavaScript and languages targeting mobile platforms such as iOS and Android.
- Communicate across team boundaries and collaborate with international peers.
- Specify and setup test plans and automation systems.

What Do You Need For Success?

- Knowledge of iOS, Android and/or hybrid mobile development frameworks.
- Experience in the design of distributed, real-time application.
- Understanding of software-design patterns and principles.
- Usability driven application development.
- Full stack development knowledge.
- Knowledge of automation tools such as Selenium Grid.
