Call for Students - GSoC 2021

Pinky: Gee, Brain, what are we gonna do this year?
Brain: Wear a mask, keep our distance, and do the same thing we do every year, Pinky. Taking over GSoC.

For the 10th year in a row, we have been accepted to be part of this incredible program to support young ambitious developers who want to work with open-source organizations like DBpedia.
So far, each year has brought us new project ideas, many amazing students and great project results that shaped the future of DBpedia.
Even though Covid-19 changed a lot in the world, it couldn't shake GSoC much. The program, designed to mentor youngsters from afar is almost too perfect for us. One of the advantages of Google Summer of Code is, especially in times like these, the chance to work on projects remotely, but still obtain a first deep dive into Open Source projects like us .
DBpedia is now looking for students who want to work with us during the upcoming summer months.

What is Google Summer of Code?

GSoC is a global program focused on bringing student developers into open source software development. Students (BSc, MSc, Ph.D.) receive funds for working on a specific project related to DBpedia.

And this is how it works ...

Step 1   Check out one of our projects here or draft your own.

Step 2   Get in touch with our mentors as soon as possible and write up a project proposal of at least 8 pages. Information about our proposal structure and a template are available here.

Step 3   After a selection phase, students are matched with a specific project and mentor(s) and start working on the project.

Interested?

Detailed information on how to apply are available on the DBpedia Website.

We are looking forward to meeting you.

Yours DBpedia Association
